

Statement on ISO/IEC 27001:2022 Certification Process

LabSense d.o.o. confirms that it is currently implementing an Information Security Management System (ISMS) in accordance with the requirements of the ISO/IEC 27001:2022 international standard.

The implementation and certification activities are being carried out within the framework of the project "Implementation of the International Standard ISO/IEC 27001:2022" (Project No. PK.1.3.04.0164), funded under the call "Support for Enterprises for Product Certification and the Introduction of Management Systems".

The project implementation commenced on 19 August 2025, with the objective of establishing a structured Information Security Management System designed to ensure the confidentiality, integrity and availability of information, as well as to strengthen the security of organisational processes and data protection practices.

As part of the certification process, LabSense has implemented internal policies, procedures and risk management practices in accordance with the requirements of the ISO/IEC 27001:2022 standard and continues to refine and formalise its information security management framework.

The certification process is currently in its final implementation phase. LabSense expects the official certification audit to be conducted in April 2026, subject to scheduling and procedures of the accredited certification body.
